## PROJECTS

### **Aivara**

This project is made during the period of PG, In this project we made a web application, in which we are making water report. We were building logic and used AI technology for processing a microscopies images of water sample and determined chemical and biological parameter of water quality. Utilized Reactjs, GraphQL, RestAPI, ExpressJs, Python . - [Aivara.in](https://aivara.in)

### **BlueRocket(Social Publishing Platform)**

This is graduation project I used reactjs and nodejs and database is MongoDB. In this project I have worked on Users and their posts. Users can post their own post on this platform with images. Provided full authentication and authorization using google API's. Inthis project I have used MERN-STACK Technology

### **Chat Application:**

A real-time chat webapp where users can login, addfriends and communicate with real time . A full-stack real-time chat application built using React, Node.js, Redis, Postgresqldb, and Socket.io

### **Hospital Management System:**

I'm developed a comprehensive hospital management system using Spring Boot for the backend and React.js for the frontend. Designed and implemented the database schema to store patient records, doctor information, appointments, and treatments Utilized Spring Data JPA for efficient data access and manipulation, incorporating CRUD operationsand complex queries. Implemented RESTful APIs with Spring Web to handle HTTP requests and responses, ensuring seamless communication between the frontend and backend.

### **PayTrackz**

PayTrakz is a partnership software having numerous features. Collectively, they help businesses across industries. payTrakz app is built to serve every industry. It is customisable to meet the requirement of your business as per your unique business requirements. It helps, manage all of their partnership requirements.
